

Museum of Science

Boston, Massachusetts

Architect for expanded facilities

As one of the first and most innovative science museums, the Museum of Science continues to be emulated by institutions throughout the United States and abroad. In 1965, we prepared a long-range master plan and provided architectural services for the major phases of its construction, including the West Wing Exhibition Building, the new Lobby, the 1000-car parking structure and exhibit support facilities, the Hall of Energy, and many renovations and expansions within the 350,000-sq.ft. facility.
