## Master Planning and Conceptual Design

We provided a master plan and conceptual design for relocating the museum to a new 167,000-sq.ft. facility downtown. The design utilizes a phased approach, with a 3D IMAX Theater and lobby comprising the first phase. The exuberant curvilinear forms of this 29,000-sq.ft. first phase establish the new public presence of the museum along the new urban park that it fronts, and allows for future museum phases to be added incrementally over time. This park-front facade has maximum transparency to accentuate views into the building and to help generate public excitement and curiosity about the activities and programs taking place inside.
